PROJECT REPORT

Cricket Player Performance Tracking Application (CRICKSTATS)

Platform : Salesforce

Date : 28/09/2026

SUBMITTED BY

Team Lead: Manikandan G

Team Members : Sanjay A

Department : Bachelor of Computer Application (BCA)

ACADEMIC YEAR 2025-2026

1.ABSTRACT

As a Salesforce Admin, I want to create a comprehensive player performance tracking application within Salesforce to capture and analyze detailed matchby-match information of cricket players. This application will include custom objects such as Player and Match Performance with carefully defined fields and relationships to ensure data integrity and accessibility. By leveraging masterdetail and lookup relationships, the application will enable robust tracking of individual and team performances, facilitate insightful reporting.

2. PROJECT OBJECTIVE

To store Player, Match, and Performance data in a centralized system.

To maintain data integrity using Master-Detail and Lookup relationships. To

auto-calculate Strike Rate, Average, etc.,

using Formula Fields.To provide easy analysis for coaches through Reports and Dashboards.

3. CUSTOM OBJECTS & FIELDS DESIGN

A) Player__c Object (Parent Object)

- Player_Name__c (Text)

- Age__c (Number)

- Role__c (Picklist: Batsman, Bowler, All-Rounder, Wicket-Keeper)

- Team__c (Text)

- Total_Matches__c (Roll-Up Summary - COUNT of Performance records)

B) Match__c Object (Parent Object)

- Match_Name__c (Text) - Eg: CSK vs MI

- Match_Date__c (Date)

- Venue__c (Text)

- Match_Type__c (Picklist: ODI, T20, Test, IPL)

C) Performance__c Object (Child / Junction Object)

This is the main object where Master-Detail relationship is used

- Player*c (Master-Detail -> Player*c)

- Match*c (Lookup -> Match*c)

- Runs_Scored__c (Number)

- Balls_Faced__c (Number)

- Wickets_Taken__c (Number)

- Catches__c (Number)

- Strike_Rate*c (Formula: IF(Balls_Faced*c > 0, Runs_Scored*c / Ball

4. RELATIONSHIPS EXPLANATION

- Player*c -> Performance*c : Master-Detail - If a Player record is deleted, its related Performance records will also be deleted. This is important for data integrity.

- Match*c -> Performance*c : Lookup - To link a performance record to a specific match.

5. SALESFORCE SETUP STEPS

1. Go to Setup -> Object Manager -> Create Custom Objects.
2. Create Custom Tabs for all 3 objects.
3. Go to App Manager -> New Lightning App -> Name: CRICKSTATS -> Add Tabs.
4. Arrange Page Layouts and add Related Lists.
5. Validation Rule: To ensure data is logical (e.g., Balls_Faced__c > 0).
6. Flow: If Runs_Scored__c >= 50, post a Congratulation message in Chatter.

6. REPORTS & DASHBOARDS

- Reports:

1. Top Run Scorers Report (Grouped by Player)
2. Match-wise Performance Report
3. Bowlers with Most Wickets

Technologies Used

Platform: Salesforce Lightning

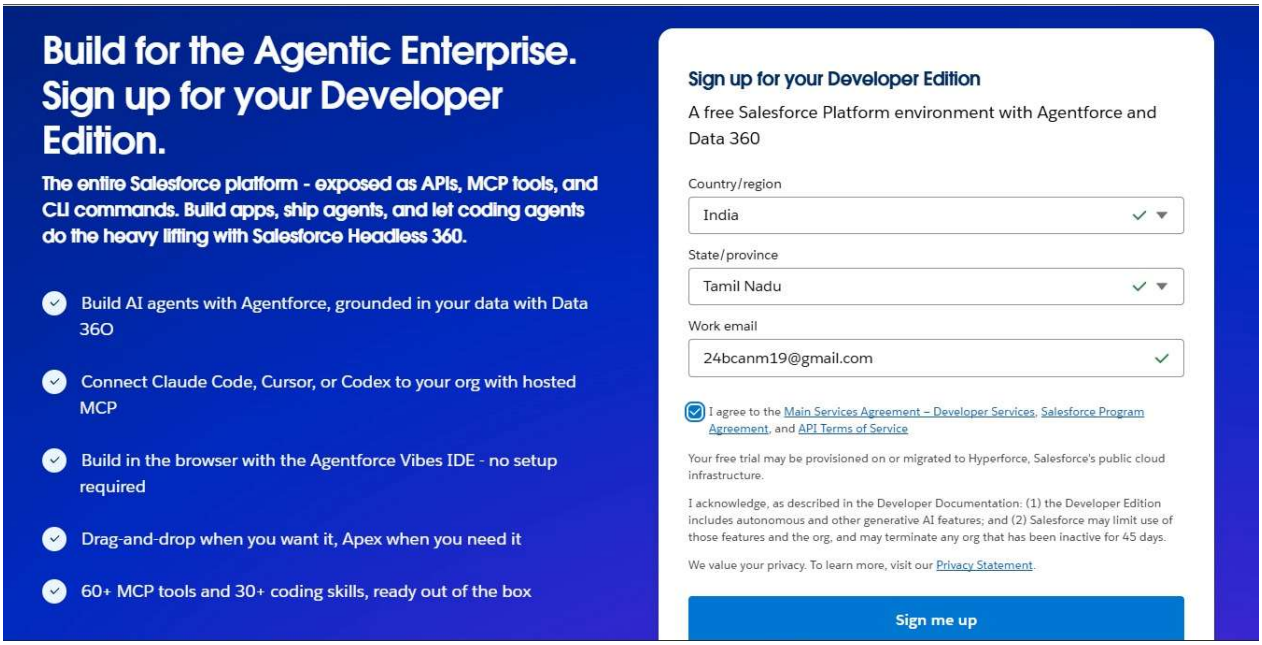

Tools: Salesforce Developer Console, Object Manager

Task Completed

TASK 1: SALESFORCE DEVELOPER ACCOUNT CREATION

Activity 1: Creating Developer Account

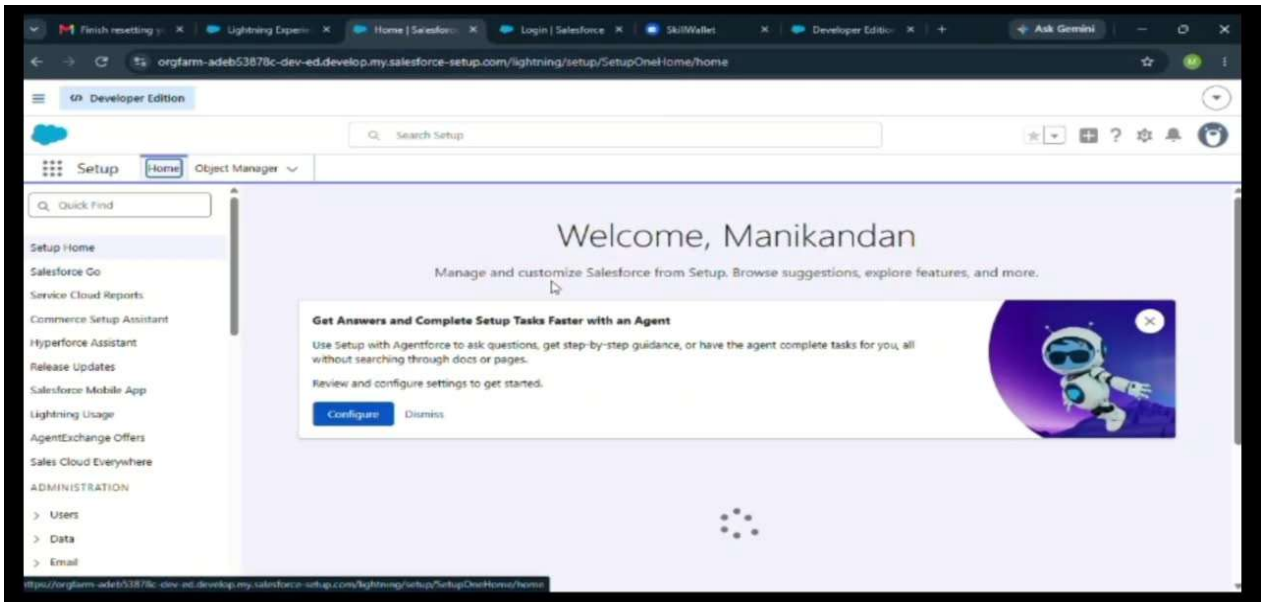

I have created a Salesforce Developer Account by going to developer.salesforce.com and signing up with my college email ID. I filled in all the required details like Name, Email, Role as Developer, Company as Government Arts and Science College Tirupattur, and Country as India. After signup, Salesforce sent a verification link.

Activity 2: Account Activation

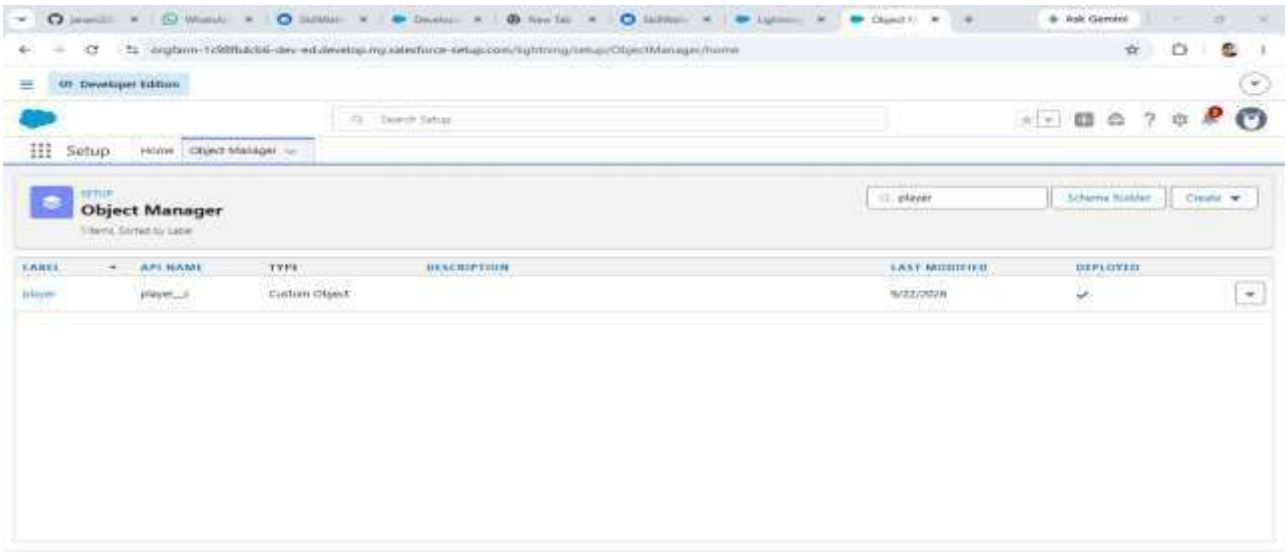

I opened my email and clicked the verification link sent by Salesforce. I set my password and security question and activated my account. Now I can login to my Salesforce Developer Org successfully using login.salesforce.com.

TASK 2: OBJECT CREATION

I created 3 Custom Objects for this project.Player__c - To store player details.

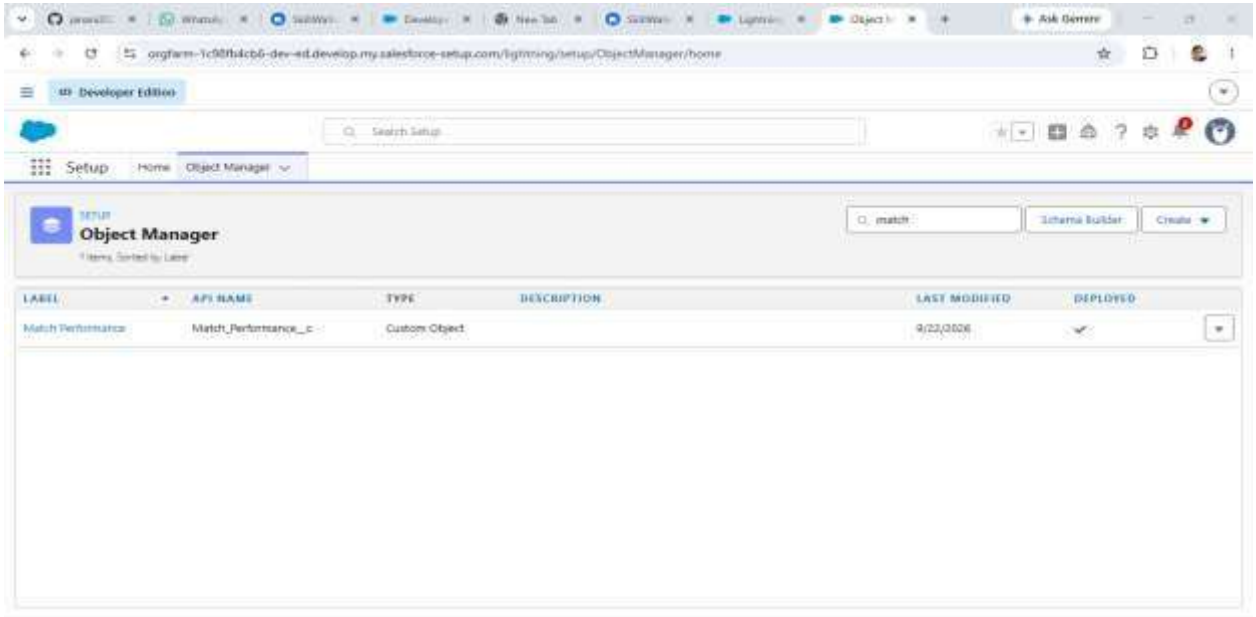

Label: Player,Plural: Players.Match__c - To store match details. Label: Match,

Plural: Matches.Performance__c - To store match-wise performance. Label: Performance,

Plural: Performances.

All objects were created from Setup -> Object Manager -> Create -> Custom Object.

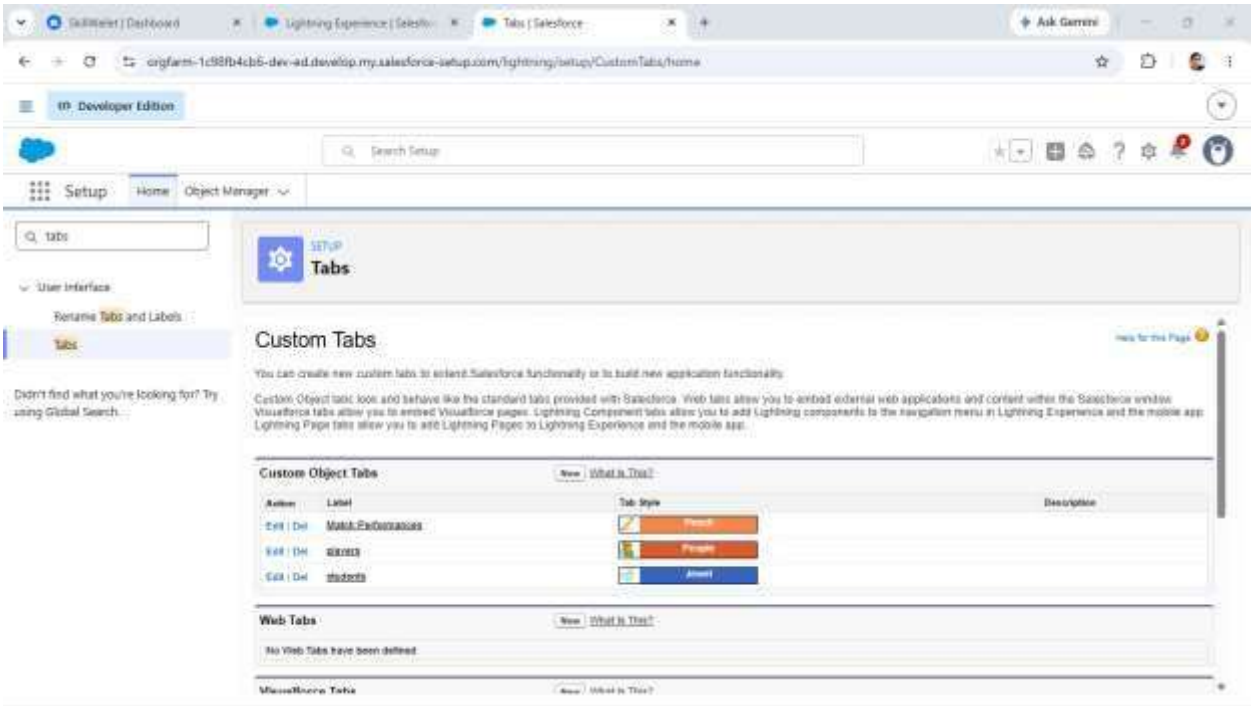

TASK 3: TABS

I created Custom Tabs for all 3 objects.

Setup -> Tabs -> New Custom Object Tab.

Selected Playerc, Matchc, and Performance__c objects and created tabs with Cricket icon. Now all tabs are visible in All Tabs.

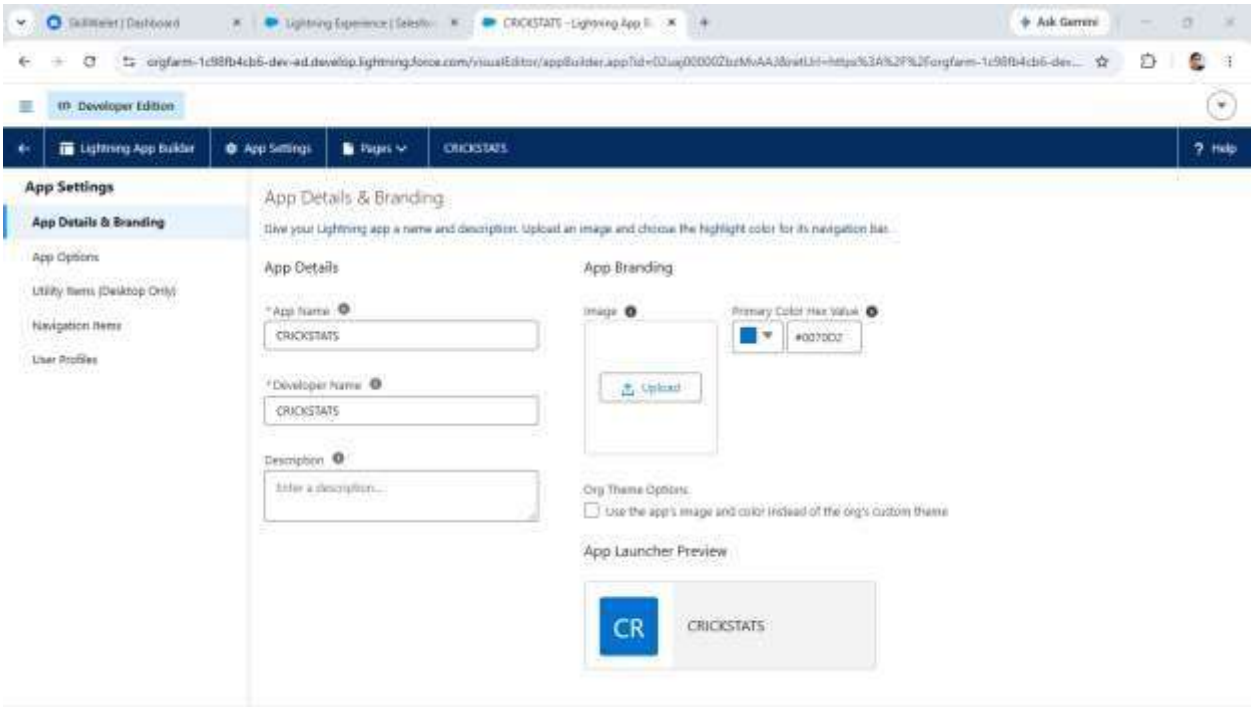

TASK 4: THE LIGHTNING APP - CRICKSTATS I

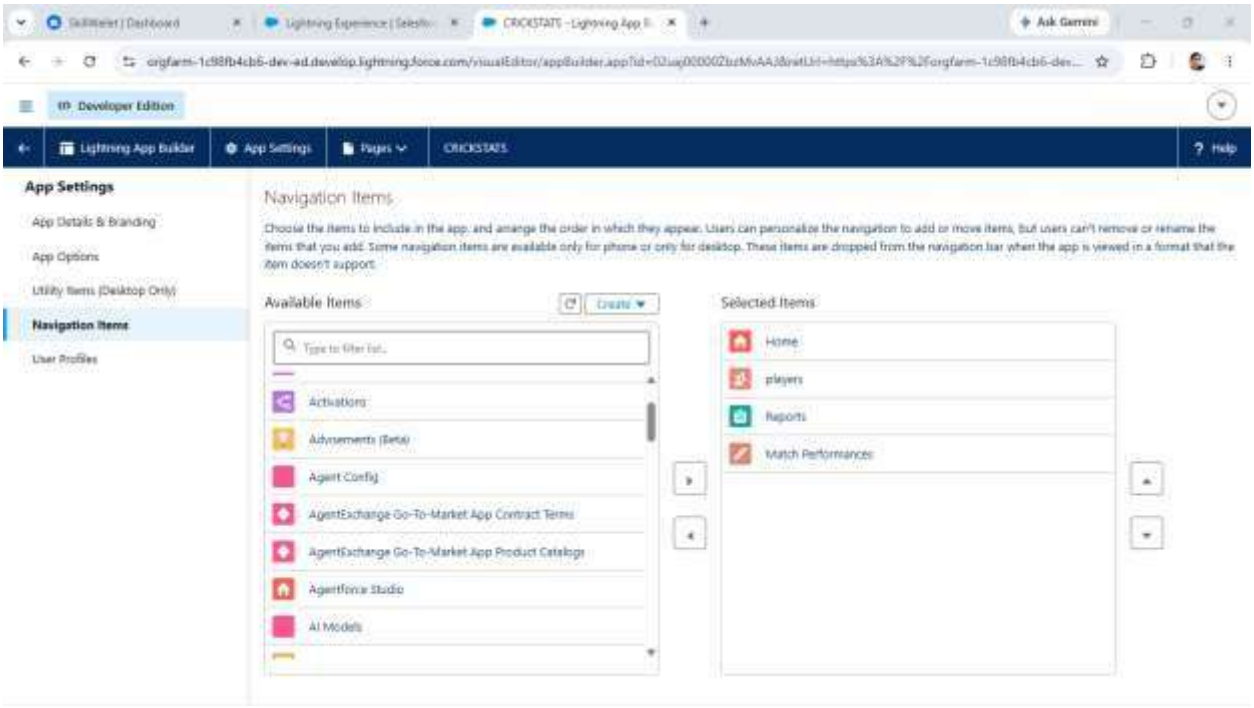

created a new Lightning App.

Setup -> App Manager -> New Lightning App.

App Name: CRICKSTATS - Cricket Player Performance Tracking Application.

I added Navigation Items: Player, Match, Performance, Reports, Dashboards. Uploaded app logo and made it visible to System Administrator profile. The app is now available in App Launcher.

Navigation Items
Choose the items to include in the app, and arrange the order in which they appear. Users can personalize the navigation to add or move items, but users can't remove or rename the items that you add. Some navigation items are available only for phone or only for desktop. These items are dropped from the navigation bar when the app is viewed in a format that the item doesn't support.

TASK 5: FIELDS & RELATIONSHIPS Player__c

Object Fields:

Player_Name__c (Text)

Age__c (Number)

Role__c (Picklist: Batsman, Bowler, All-Rounder, Wicket-Keeper)

Team__c (Text)

Match__c Object Fields:

Match_Name__c (Text)

Match_Date__c (Date)

Venue__c (Text)

Match_Type__c (Picklist: ODI, T20, Test, IPL)

Performance__c Object Fields:

Playerc (Master-Detail Relationship to Playerc)

Matchc (Lookup Relationship to Matchc)

Runs_Scored__c (Number)

Balls_Faced__c (Number)

Wickets_Taken__c (Number)

Strike_Ratec (Formula: Runs_Scoredc / Balls_Faced__c * 100)Is_Centuryc (Formula Checkbox: Runs_Scoredc >= 100)

TASK 6: ROLL-UP SUMMARY

I created a Roll-Up Summary field on Player__c object.

Field Name: Total_Matches__c

Function: COUNT of Performancec records. This field shows how many matches a player has played. I also created Total_Runsc as Roll-Up Summary with SUM of Runs_Scoredc from Performancec. This is possible because Player and Performance have Master-Detail relationship.

TASK 7: FLOWS

I created a Record-Triggered Flow on Performance__c object.

Flow Name: Century Celebration Flow.

Condition: When Runs_Scored__c >= 100

Action: Create a Chatter Post on Player record saying "Congratulations! Century Scored!".

This flow is active and it helps to automatically appreciate players when they score a century.
